

ITS Hosted Video Surveillance System

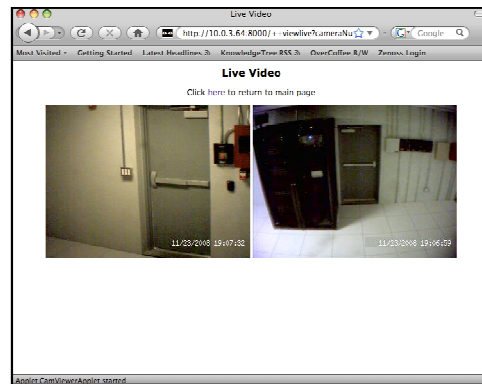

Web based Video Surveillance System with low upfront cost.

Quick Setup, Easy to Use

The ITS Hosted Surveillance System is easy to install and use. The system uses network or analog cameras and video servers. The cameras are then recorded back to a DVR hosted in the ITS Data Center. Footage is available via an easy to use web interface. Cameras can have advanced functionality such as infrared night vision and pan tilt zoom (PTZ) functionality.

Main Surveillance Window

Live Video Feed

Permissions

The system allows for permissions to be setup per user, per camera. Administrators can allow users to view the live feed but not review footage. Delete capabilities can also be controlled.

Recording

Recording can take place continuously, time-lapse, or upon motion detection. Detection sensitivity can be controlled per camera.

Advanced Features

The system can be programmed to detect motion events and actions can be automated, such as an email with footage attached.

Installation

The system can be professionally installed and serviced by ITS personnel. Maintenance and support plans are also available.
